

## Top 6 reasons people choose VNC Connect

RealVNC remote access enhances operational efficiency

VNC Connect is used by millions of people every day to share their computer screens across the office or around the world. While some business benefits of a remote access strategy may vary across industries, a number of common and compelling themes have emerged when speaking with our customers. Here are just a few of the most frequent VNC Connect business benefits cited by our customers.

### Reduce Cost

Right-first-time problem resolution cuts the cost of supporting remote systems and applications by reducing call handling time, the number of repeat calls, and travel for on-site support.

### Save Time

Save employee time by reducing the need to prepare and maintain specialized training programs and support documentation for field based personnel.

### Improve Quality

Engaging, real-time connections improve the overall quality of support activities and create much greater employee and customer satisfaction.

### Increase Uptime

Better system and application control prevents faults and increases the speed of problem identification and resolution; improving uptime and reducing lost opportunity cost.

### Mitigate Risk

Proactive management of remote systems and applications helps organizations anticipate and prevent failures and reduces the risks associated with on-site support activities.

### Meet Goals

A remote access strategy can play a significant role in helping organizations meet business objectives and regulatory obligations by providing essential audit and security functionality.

## Connect & take control

Whether you're looking for a Home, Professional or Enterprise remote access solution, VNC Connect can improve the operational efficiency of your organisation. Take advantage of our free trial and test VNC Connect for yourself.
